

# MRI Hip Mini Fellowship

## A Guided Online Course

### What's The Mini Fellowship About?

A Guided 30 day course where we cover the Imaging on MRI of intra and extra articular pathologies of the Hip. By the end of the Mini Fellowship you should be much more Confident to Assess and Report MRI of the Hip

### What Do We Cover?

All the relevant Anatomy, Pathology, Clinical and Imaging findings. Where to Look, What to Look For and How to Report them more Confidently.

### How Do You Learn It?

Daily posts with a combination of text, images, videos, dicoms, quizzes and the ability to ask questions to Dr Ravi throughout the course to guide you and clear doubts.

Guided Learning

### Who's Teaching

Dr Ravi, is the Director of Radiology Education Asia and a Senior Consultant Radiologist from Australia now in Singapore. He has been teaching MSK and Spine MRI for over 10 years and his aim in the courses is not just accumulating facts, but for you to be reporting more confidently at work.

His method of teaching is to simplify, without losing the essential things we need to know. For you to easily recognise the important anatomy, the relevant macroscopic pathology which helps to understand the imaging findings and for you to know where to look and what to look for. All of these help you to report a scan with Confidence and issue reports that you are proud of and will be respected by referrers.

*Report with Confidence*

# REPORT MORE CONFIDENTLY: TOPICS COVERED

## 1. SEQUENCES/ REPORTING STRUCTURE/ APPROACH TO ASSESSING A SCAN

- Full thickness tears and Ruptures
- Peroneal Tubercle
- Peroneal retinaculum and Subluxation/ Dislocation

## 2. LABRUM

- What to look for, How to assess and How to report
- Normal anatomy and MRI appearance
- Tears/ Dysplasia/ Mucoïd Degeneration

## 3. FEMORO ACETABULAR IMPINGEMENT

- ATFL, CFL, PTFL
- What to look for, How to assess and How to report
- Normal anatomy and MRI appearance
- Cam, Pincer and mixed fai: How to Diagnose and Report

## 4. LIGAMENTUM TERES

- What is it, How to assess and report
- Normal anatomy and MRI appearance
- Partial and Full thickness tears

## 5. CARTILAGE

- How to Assess and Report
- Normal anatomy and MRI appearance
- Partial and Full thickness loss

## 6. HIP X-RAYS

- The important Lines & Angles to know.

## 7. HAMSTRINGS

- How to assess and report
- Normal anatomy and MRI appearance
- Peritendinosis, Tendonosis, Partial & Full thickness Tears and Rupture

## 8. ADDUCTOR MAGNUS

- Peroneus brevis and Peroneus longus
- Normal anatomy and MRI appearance
- Tendonosis, Tenosynovitis, Partial/

## 9. LATERAL HIP PAIN: GLUTEAL TENDONS & BURSA

- Normal anatomy and MRI appearance
- Peritendinosis, Tendonosis, Partial & Full thickness Tears and Ruptures
- Gluteal bursas

## 10. ISCHIOFEMORAL IMPINGEMENT

- What is it, what to look for and How to report
- Normal anatomy and MRI appearance
- The easy way to find the Quadratus femoris muscle
- Impingement, Tears and Atrophy

## 11. RECTUS FEMORIS

- Where to look, what to look for and how to report
- Normal anatomy and MRI appearance
- Tears and Avulsions

## 12. ILIOPSOAS

- Normal anatomy and MRI appearance
- Paratenonitis, Bursitis, Tendonosis, Partial/ Full Thickness tears and Ruptures

## 13. AVASCULAR NECROSIS

- Normal anatomy and pathology
- The various stages and appearances of avn: what to look for and report X-ray, CT & MRI

## 14. TRANSIENT OSTEOPOROSIS

- Normal anatomy and Pathology
- What to look for and Report

## 14. SUBCORTICAL FRACTURES

- Normal anatomy and Pathology
- What to look for and report X-ray, CT & MRI
